Blackhawk
Inventory Control Suite

Save

Blackhawk's Inventory Control Suite provides the scan-centric tools needed to reduce on-hand inventory, to increase inventory turns, save valuable square footage, and improve the bottom line. Every module within our suite, focuses on material management efficiency resulting in savings in Time, Money, Floor Space, and Frustration.

Discover

Blackhawk's Inventory Control Suite provides a real-time picture of what is happening with all of your plant's materials. Because of this, Users and Managers will begin to discover areas for efficiency and process improvement. These indirect benefits of the Suite are a value all their own.

The Story

With the Blackhawk Inventory Control Suite everything that happens to material from receipt to out the door is tracked. Every time a container is touched we continue to build it's life history.

The Scan-Centric Tools You Need

> Scan-To-Receive
Real-time accurate inventory starts at receiving. Blackhawk's Scan-To-Receive module systematically identifies each container that comes into your facilities receiving area. Recording the container's part and quantity information is just the beginning. Supplier non-conformance is accurately measured, including the labor required to manage incorrect BOLs and ASNs, and bad container labels.

> Receiving Discrepancy Report (RDR)
Blackhawk's Receiving Discrepancy Reports provide the ability to track shipments that come in with issues and provides reporting based on the metrics that are important to your organization. Track your supplier performance with the ability to support your need to recover their non-conformance costs.

> Repetitive Automotive Parts Warehousing (RAPS)
Set up the facility based on what works best for operations, not what works best for outdated inventory control practices. Blackhawk keeps track of the inventory so you can put it wherever works best for you.

> Scan-To-Move
Blackhawk simply tracks all of your material by scanning the container's serial number to the location where it is being placed. Easily track all of your inventory as it moves through your facility. Never waste time searching for missing inventory again.

> Scan-To-Cycle Count
Every facility needs to audit their inventory. Blackhawk makes it easy. Pick one or many locations - and scan. Blackhawk handles the rest.

> Crib Management
Keep track of the little things. By setting Min/Max levels, the Crib Management module eliminates the need for constant inventory checks in the Supply Crib. Need a set of gloves, scan your badge and scan the box of gloves. You are now the proud owner of a pair of gloves and Blackhawk will let you know when to order more.

> Replenishment
No more walkie talkies, no more screaming, no more searching. Blackhawk's Replenishment module lets the operator call for a product through scanning the serial number or a part number, then Blackhawk sends the picker to the exact location of the oldest inventory.

Blackhawk Systems - Trusted in the Industry
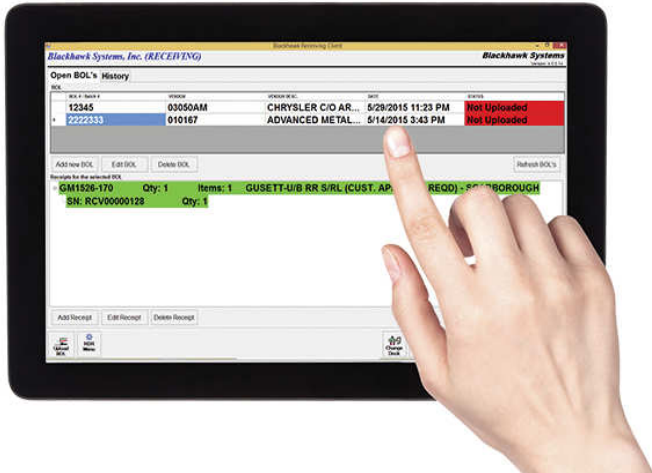

Case Study

For our case study we are tracking the performance of a large Tier 1 Plant that began their implementation 7 months ago. They have fully implemented Scan-To-Receive and are in the final stages of setting up their warehouse with Repetitive Automotive Parts Warehousing. The impact of all of their efforts caught the attention of corporate management and their reaction was to send all of their Materials Managers to learn how to replicate what they were doing.

The Impact

The impact of the implementation of **Scan-To-Move** and **Repetitive Automotive Parts Warehousing** has been astounding.

> Inventory Turns

Scan to Receive has increased incoming inventory accuracy which has caused an increase in Inventory Turns by **150%**. The increase in Inventory Turns means a reduction in Inventory Levels.

> Inventory Levels

The decrease in Inventory Levels has meant a reduction in Inventory Budget by **$2 Million** which accounts for **25%** of the overall Inventory Budget.

> Floor Space

RAPs Warehousing has caused a reduction in the space needed to house inventory. Our Case Study saw a reduction of **50,000 sq. ft.** from 125,000 sq. ft. to 75,000 sq. ft.

> Management Recognition

During these successes, Corporate Management has sent numerous United States Materials Managers to this plant to learn from the practices that have been set in place.

The Buzz

"Blackhawk's service and support are unmatched by anyone I have worked with in the industry."

-Thomas Urbina
TEAM Magna

"Blackhawk understands the importance of inventory accuracy and it's financial impact and that is key in a Warehouse Management Software system."

-April Bohland
TEAM Magna

"Overall, we have been very satisfied with the professionalism and level of knowledge demonstrated by Blackhawk and are looking forward to a continued business partnership."

-Rich Corelli
KAUTEX NA

"Blackhawks implementation team has been a real pleasure to work with. Where required, they have also been extremely accommodating."

- Lori Ashbourne
